HR Analytics Case Study – BUSINESS PROBLEM

HR Analytics Case Study – BUSINESS OBJECTIVES

HR Analytics Case Study – Analytics Model Development Steps

Developing Model – Data cleaning, Derived fields

Developing Model – Low AIC, Low P values, Low VIFs

Build Initial Model consists of all variables

StepAIC in both direction to reduce the number of variables automatically and removed variables whose impact is less or not at all

Build model with low AIC values and variables with low P values and Check for low VIFs

Developing Model – Final Model

```
> summary(model_10)

Call:
